# General Information

**StrikeOut™** is a residual synthetic pyrethroid insecticide for the control of flying and crawling insect pests in domestic, industrial and public areas.

**StrikeOut™** provides a protective residual barrier on treated surfaces which will last for several weeks. However most insects will not crawl over or land on residual deposits because of the repellent action. As the residual deposit wears off so does the effect of the repellent action and insects become inclined to crawl over or to land on treated surfaces.

**StrikeOut™** is suitable for treating all surfaces, but for improved residual activity on porous surfaces such as unpainted brick, concrete block, bare timber or fibrous cement, a suspension concentrate product such as Key Delta™ Aqua or KB40™ will provide longer residual control.

## Benefits of using StrikeOut™

- ✓ **StrikeOut™** has knockdown, repellent and residual activity against most insect species.
- ✓ **StrikeOut™** is compatible with most pest control products such as IGR insecticides and additives such as Sprayfast®.
- ✓ **StrikeOut™** is a high quality oil in water emulsion incorporating zeta sized technology. These zeta sized particles of cypermethrin are extremely small within the spray droplet. This provides rapid uptake by insects giving very quick knockdown.
- ✓ **StrikeOut™** can be used through Ultra low volume misting equipment and by thermal fogging using Fog-It™ as the fogging agent.
- ✓ **StrikeOut™** is MAF approved Type B (for use in premises processing all animal product except dairy).
- ✓ AssureQuality approved Category C – food/beverage/dairy factory and storage areas (Category B point applies).

**Key Industries**

Protecting people, crops and native species

**StrikeOut™** has been formulated and manufactured in New Zealand for New Zealand conditions and proven effective against flying and crawling insects – flies, fleas, mosquitoes, cockroaches, spiders and silverfish.

## Directions for use

Always read the label first.

**APPROVED HANDLER:** This product must be secured or under the personal control of an approved handler when: a) applied in a wide dispersive manner or (b) used by a commercial contractor.

### Usage rates

Initial Treatment	50ml/5 litres of water
Maintenance treatments	25ml/5 litres of water

Apply as a fine spray at the rate of 5 litres of spray mix per 100m<sup>2</sup> or to the point of runoff, which will vary with the nature of the surface being treated. If using ULV application (eg Pioneer ULV or B&G 2600) adjust the dilution so that 50ml of **StrikeOut™** is applied per 100m<sup>2</sup>.

## THERMAL FOGGING OF WAREHOUSES AND SILOS

Limited residual control of flying and crawling insects in harborage. Mix 100ml of **StrikeOut™** in 200ml of **Fog-It™**. Apply 300mls of the diluted product per 1000m<sup>3</sup>.

**StrikeOut™** repels insects from crawling or landing on treated surfaces. For this reason it should not be used in conjunction with a baiting programme for ants or cockroaches.

## IMPORTANT! APPLICATION IN HOUSES

When spraying inside dwellings or for optimum residual activity, spray should be surface applied and not directed into the air. For all applications at least 3 hours should be allowed before re-entry after spraying. This allows for thorough ventilation and any airborne particles to settle.

Do NOT allow spray to contact food, food preparation surfaces or food utensils. Do NOT use in areas where edible dairy or meat products are processed, packed or stored. Do NOT use where food packaging materials (cartons, liners etc.) are stored or assembled. Do NOT use near air vents or ducts in food stores or processing plants while they are in operation. Wash all food contact surfaces thoroughly before reintroducing any foodstuffs.

**CAUTION:** Spray applicators should take precautions to avoid contact with the concentrated spray or spray solution by wearing gloves, eye protection, long sleeved overalls and face mask. **StrikeOut™** may cause a burning sensation (parathesia) if it contacts the skin or eyes.
