Vendetta[®] Cockroach Gel Bait

- Fast knockdown
- Long residual
- Non-repellent

 **ALWAYS READ THE LABEL BEFORE USE**

Vendetta[®]

Cockroach Gel Bait

Vendetta[®] cockroach gel bait is high-performance gel bait technology specially formulated to be highly attractive and effective – even on the toughest, “hard-to-kill” cockroach populations.

INTEGRATED PEST MANAGEMENT

Use Vendetta as part of an Integrated Pest Management (IPM) programme. Rotation of Vendetta[®] with other cockroach baits with different active ingredients is recommended over the course of the year to avert the development of additional forms of behavioural resistance. Additionally, application of an insecticide such as Carbodox™ is an excellent supplemental treatment option.

PRODUCT SPECIFICATIONS

Active Ingredient	Abamectin BI 0.5g / kg
Appearance	Light brown coloured paste
Food handling	For use in food and non-food areas
Activity	By ingestion
Shelf Life	3 years

USE AREAS

Indoors in food and non-food areas, such as: homes, flats, apartments, hotels, motels, restaurants, schools, warehouses.

In transportation equipment: ships, aircraft, trains, buses.

DO NOT apply to humans, animals, clothing or bedding.

Application Rates

Light infestations: 4–6 bait points per 10m² are recommended

Heavy Infestations: 12–24 bait points per 10m² are recommended

Each bait point should equal 0.25–0.50 grams of product. A spot of approximately 3mm in diameter equals 0.25g of product, while a spot approximately 6mm in diameter equals 0.50g of product.

The bait will adhere to non-greasy or non-dusty surfaces and will remain pliable and palatable to cockroaches as long as it is visibly present.

A visual inspection of bait placements is recommended one month after the initial treatment. Reapply when bait is no longer visibly present, according to the level of infestation. Replace bait before it is completely consumed to keep cockroaches returning.

DO NOT place baits in locations that are routinely washed, as bait will be removed by washing.

DO NOT treat food preparation surfaces.

Avoid contact with textiles and clothing, as bait may stain

DO NOT apply gel bait to areas that have been sprayed with a repellent insecticide or spray over the gel with a repellent insecticide as cockroaches will no longer be attracted to the bait. Carbodox™ or Recruit™ are suitable partners with gel baiting applications as they are non-repellent insecticides.
