Customer proposition

The Fluorescent Tracking Gel is an excellent tool to investigate and highlight rodent movement in facilities such as food production sites and warehouses as well as difficult-to-observe locations ie. along rafters.

The Fluorescent Tracking Gel can also be used to draw the attention of customers to rodent activity in their facility. With the use of a UV torch, the tracks of fluorescent gel will glow and can be traced for several meters on both horizontal and vertical surfaces.

Commonly used tracking dust solutions can be difficult to deploy and clean up, especially in food handling facilities, putting a strain on service times and levels. The Fluorescent Tracking Gel can generate up to 40% in product savings compared to tracking dust solutions. The easy-to-use squeezable bottle with an applicator brush allows for precise and effortless dispensing and spreading of the gel onto desired surfaces.

The Fluorescent Tracking Gel is a specially formulated, non-toxic gel which does not dry out. It sticks to the feet, tail and fur of rats and mice - and as the rodents go about their activity, they unknowingly deposit the tracking gel wherever they go. With the rodent movement now clearly mapped, key potential bait and monitoring points can be identified and will be invaluable in establishing root causes in difficult infestations.

Rodents that have been caught can be further inspected using the UV torch (fur and paws) to determine if they have been in contact with the Fluorescent Tracking Gel.

The Fluorescent Tracking Gel is easily removed after treatment.

Key features & benefits

- Easy to apply and easy to clean, resulting in reduced service time
- HACCP certified for use in Splash and Spill Zone (SSZ) in food handling areas such as kitchens, production areas and processing areas, but are not suitable for coming directly into contact with food or items that will touch food.

Service

Recommended product use

- For inspection of rodent activity, to track rodents, understand movement habits and identify potential harbourage points, prior to placing monitoring and baiting stations.

Service element

- Service carried out by trained professional Rentokil service technicians

Service promise

- Customer careline for enquiries and emergencies

Safety

- Take care when using the product and be aware of surroundings at all times
- Ensure cleaning of all areas where gel was applied

Transport

- Product can be transported with no special requirements

Disposal

- Dispose of empty bottle responsibly, following Rentokil Policy and local regulations
- Not classed as pest control waste
