Termidor[®] HP II High Precision Termiticide Frequently Asked Questions

Q1: What is Termidor HP II High Precision Termiticide?

A1: Termidor HP II High Precision Termiticide is the latest liquid termiticide innovation from BASF that substantially reduces the need to dig trenches, drill or rod while completing a full conventional or EP/LI termite treatment. This innovation provides the fastest method for completing a liquid termite treatment.

Q2: What are the advantages of Termidor HP II High Precision Termiticide compared to other liquid termiticides?

A2: It offers what other liquid termiticides don't. With Termidor HP II High Precision Termiticide, in most cases, you will not have to dig trenches to apply the product around the foundation of the structure, treat as deep – in basements, or drill abutting hard surfaces. With Termidor HP II High Precision Termiticide, you will notice substantial time savings per job.

Q3: What are the advantages of Termidor HP II High Precision Termiticide compared to bait solutions?

A3: Termidor HP II termiticide provides a uniform vertical zone around a structure which results in 100% control of termite within three months. With Termidor HP II termiticide, any underground termite activity nearing the structure will be impacted by the Hydraulic Trenching Zone(s) or treatment zone(s). Termites passing through the non-repellent treated zone can share a lethal dose of Termidor termiticide with termites in the colony – and provide termite control within three months.

Q4: Why should I use Termidor HP II High Precision Termiticide?

A4: You can complete a liquid termiticide EP/LI application in up to 90% less time (compared to other liquid termiticides) using Termidor HP II High Precision Termiticide, 100% control of termites.

Q5: What's the difference between Termidor[®] HP and HP II High Precision Termiticide ?

A5: While Termidor HP and Termidor HP II High Precision Termiticide both utilize a patented high precision injection system, Termidor HP II High Precision Termiticide provides some advantages over Termidor HP High Precision Termiticide. Termidor HP II High Precision Termiticide provides the professional the opportunity to treat around abutted slabs without drilling, unless termite activity is present.

Q6: Where can I purchase Termidor HP II High Precision Termiticide?

A6: It can be purchased at your favorite distributor.

Q7: Where can I use Termidor HP II High Precision Termiticide?

A7: It can be used in all states that have registered the label. In those states, Termidor HP II High Precision Termiticide can be used to treat residential and commercial structures for termite control and/or prevention.

Q8: How do I use Termidor HP II High Precision Termiticide?

A8: Follow the label! If you are offering termite treatments in a state that has minimum standards, follow the regulations of the state and the requirements of the product label. Termidor HP II High Precision Termiticide can only be applied with the Termidor HP II High Precision Injection System.

Q9: Who can use Termidor HP II High Precision Injection System?

A9: Pest Management Professionals with an active signed lease for a high precision injection system can use Termidor HP II High Precision Injection System for termite treatments.

Q10: How does Termidor® HP II High Precision Injection System work in different types of soils?

A10: Termidor HP II High Precision Injection System is designed to be adjusted according to the soil compaction/type of soil. The unit has three options for different types of soil, low, medium, and high. It is up to the operator to determine the appropriate setting according to their geography and soil type. In most treatments, medium setting is sufficient.

Q11: How does Termidor HP II High Precision Injection System effectively treat a basement home while using 75% less product than conventional methods?

A11: The precision and accuracy of the injection system allows it to be uniformly distributed on the top 12 inches of soil where the majority of termite foraging activity is found.

Q12: Does Termidor HP II High Precision Termiticide work on Formosan termites?

A12: Yes, we have research information to demonstrate the efficacy of the product. Remember that aerial colonies formed by Formosan termites will require localized interior treatments in addition to the injections around the structure.

Q13: What is the high precision injection system?

A13: The Termidor HP II High Precision Injection System is a combination of a base unit, high pressure hose and reel and precision injection device or PID. This technology is required for termite treatments when using either Termidor HP or HP II High Precision Termiticide. Contact your BASF sales specialist or distribution professional to learn more.

Q14: How do I get a high precision injection system?

A14: Please contact your BASF sales specialist to learn how to acquire a high precision injection system.

Q15: Is training available for Termidor HP II High Precision Injection System users?

A15: We provide a full comprehensive training for its utilization.
