

Product Description: Diamond glue traps pre-baited with Plodia/ Ephestia/Lasioderma/Trogoderma pheromones in addition to food attractant for other insects.

Specification: Non-drying glue trap with Pherogel containing a pheromone blend for Plodia/Ephestia/Lasioderma/Trogoderma spp.

Expected action: 8 - 10 weeks attraction of the target insects.

Placement: For an effective program, it is important that the traps are placed in the best position available. When they are replaced, the positioning should be altered as little as possible so that information from different times of the year can be accurately compared. Traps should be placed when temperatures reach 55°F or higher.

Application: Use as part of a comprehensive monitoring program in food processing facilities, supermarkets, delicatessens, food storage warehouses, restaurants, bakeries, pet stores, museums, etc. The rate of use will depend largely on the structure of the monitored location, layout of machinery and ventilation outlets. For a starting point, place traps in a grid pattern (30 - 50 ft.); or in shorter intervals to pin point infestations. This rate may be changed later to take into consideration the above mentioned parameters. Hang around head height in an area with good air movement. Avoid blocking trap entrances. Place away from fork lift pathways and other potential moving objects. If possible, positions should be chosen that offer shelter for the trap (example: near fire hoses or fire extinguishers).

Common use: Monitoring of insect population. Decisions of interventions should not be taken solely on trap catch. Other means of insect sampling should also be considered.

Target insects: Indian Meal Moth, Almond/Cocoa Moth, Raisin Moth, Tobacco Moth, Mediterranean Flour Moth, Cigarette Beetle, Khapra Beetle, and Warehouse Beetle. **Packaging:** 6 traps in a re-sealable laminated foil bag. **Shelf life/Storage:** When stored correctly at room temperature, the product should remain active for a period of 2 years from the date of production.

Handling and Disposal: Avoid heat and direct sunshine. Dispose according to local regulations and away from monitored areas.

Contact with Lures: XLure R.T.U. is safe to handle. Avoid unnecessary and extensive contact with skin since some contaminants such as nicotine can have a repellent effect.
